FIG. 12 is a block diagram of a client-server system. The client (h2001) includes a client control program (h2007), a client data link layer address (h2008), and a client network layer address (h2009). These are connected to a client communication control unit (h2003), client memory (h2004), and a client CPU (h2005) via a client internal bus (h2002). The client is connected to a server (h1001) via a network bus (h3001). The server includes a server communication control unit (h1003), server memory (h1004), and a server CPU (h1005). These are connected to a server control program (h1007), a data link layer address table (h1008), and a network layer address table (h1011) via a server internal bus (h1006). The server also includes a keyboard (h1009) and a display (h1010).
